Green light (NO charging but gives output )  
Toggle Switch : On/off Power supply (For charging kindly switch on )  
Battery Type : Li-ion  
Overcurrent Protection : Protected  
Short Circuit Protection : Protected

## HANDLING

- **Inspect for Damage** : Regularly check for signs of wear, such as a swollen battery, cracked casing, or exposed wires. If you notice any damage, stop using it immediately and dispose of it safely
- **Don't Drop or Crush** : Physical damage can rupture the battery, leading to leaks or even a fire hazard.
- **Avoid Overheating** : If the power plus II feels unusually hot during use or charging, unplug it and let it cool down before using it again. Persistent overheating is a sign of a problem
- **Don't Disassemble** : Never attempt to open or repair a Power plus II yourself. Internal components like lithium batteries can be dangerous if mishandled
- **Charge in a Safe Environment** : Place the power plus II on a flat, non-flammable surface while charging. Avoid charging it on beds, sofas, or near flammable materials.
- **Avoid Moisture** : Keep it away from water or humid environments to prevent short circuits or corrosion

## DISPOSAL

**Proper Recycling**: When your Power plus II reaches the end of its life, don't throw it in the trash. Take it to an electronics recycling center, as lithium batteries can be hazardous if improperly disposed of.

## HANDLING A SWOLLEN POWER PLUS II

If your Power plus II swells, stop using it immediately and unplug it carefully, placing it on a non-flammable surface away from flammable items, people, and pets to avoid risks like leaks or explosions. Do not puncture or open it; instead, let it cool down and dispose of it at an electronics recycling center per local rules-never in regular trash. Contact the manufacturer for further advice.

## IMPORTANT NOTE

The company will not be responsible for any damages injury, or malfunction resulting from improper usage, mishandling, or failure to follow the manufacturer's instructions
